OBJECTIVE

Seeking a challenging Data Engineering role to leverage my expertise in advanced data management and innovative analytics solutions to drive actionable business intelligence and support data-driven decision-making.

EDUCATION

Bachelor of Science in Computer Science
Worcester Polytechnic Institute (WPI)

2019

WORK EXPERIENCE & PROJECTS

- **Software Engineer, Talcott Resolution, Hartford CT** *June 2023 - Present*
 - Modularized reusable market data file processing strategies in Python Datalake project. These processes are configured through Runcofig entries in an SQL Runcofig table and scheduled via Autosys jobs.
 - Structured Oracle resources that feed data from financial instruments to Power BI and visualizations that allow the business to prioritize decision making through actuarial models & outcomes.
 - Implemented React company website with pages for the business to access Power BI reports, submit tax forms with versioning logic, and the ability to upload and download datasets.
 - Led AI and innovation research for PowerBI reporting. Presented features & proposals to the CIO, Head of Infrastructure, & executives at Talcott Resolution.
 - Completed an efficient reusable Python system to determine data discrepancies in financial data assets. Reported results to assess data providers and their limitations.
- **Software Engineer, Optum TDP, Boston MA** *2020 - 2023*
 - Wrote Python ETL pipelines to prepare WAV audio data for Azureml ASR model training.
 - Led team strategy for optimal ASR audio segmentation used for model training.
 - Automated Jenkins jobs to run Azure Defender vulnerability scans on all images produced by Dockerfiles in the organization. Implemented email alerting that includes remediation guides.
 - Implemented OAuth identification tracking on various resources and published analytics to analytical dashboards.

ADDITIONAL PROJECTS

- **Stock Trading Application** *2019 - Present*

Developed personal stock trading Python scripts that run daily in GCP, scheduled on a daily crontab schedule. This functionality includes:

 - Pulling stock recommendations and news from various sources utilizing the Python requests library.
 - Algorithmically selecting tickers to monitor for breakouts.
 - Scraping realtime market data through Requests & BeautifulSoup Python libraries for realtime monitoring.
 - Placing buy/sell orders utilizing the Python Alpaca API with Textbelt text message alerts when trades are executed.

SKILLS

Software:

Autosys | Azure Cloud Infrastructure | Azure Databricks (ETL) | Azure Devops | Docker | Draw.io | Figma | Flask | GCP | GitHub | Jenkins | Kubernetes | Microsoft Office | Oracle Toad | Pandas | Postman | Power BI | PyCharm | Terraform | VSCode | Zoom |

Programming Languages (years):

Python (7) | SQL (6) | Java (3) | Javascript (2) | Groovy (2) | Swagger (2) | React (2) | CSS / HTML (2) | C (2)
