OBJECTIVE

Seeking a Data Engineering role where I can apply my expertise in data management and analytics to deliver actionable insights and support complex, informed business decision-making.

EDUCATION

Bachelor of Science in Computer Science
Worcester Polytechnic Institute (WPI)

2019

WORK EXPERIENCE & PROJECTS

- **Software Engineer, Talcott Resolution, Hartford CT** *June 2023 - Present*
 - Developed end-to-end data solutions scripted in Python, integrated with DevOps pipelines, and scheduled in AutoSys, leveraging SSMS Data Lake to drive actionable analytics in Power BI.
 - Modularized reusable market data file processing strategies in Python Datalake project. These processes are configured through Runconfig entries in an SQL Runconfig table and scheduled via Autosys jobs.
 - Structured Oracle resources that feed data from financial instruments to Power BI and visualizations that allow the business to prioritize decision making through actuarial models & outcomes.
 - Implemented React company website with pages for the business to access Power BI reports, submit tax forms with versioning logic, and the ability to upload and download datasets.
 - Led AI and innovation research for PowerBI reporting. Presented POC & proposals to the CIO, Head of Infrastructure, & executives at Talcott Resolution.
 - Completed an efficient reusable Python system to determine data discrepancies in financial data assets. Reported results to assess data providers on their limitations.
- **Software Engineer, Optum TDP, Boston MA** *2020 - 2023*
 - Wrote Python ETL pipelines to prepare WAV audio data for Azure ML ASR model training.
 - Led team strategy for optimal ASR audio segmentation used for model training.
 - Automated Jenkins jobs to run Azure Defender vulnerability scans on all images produced by Dockerfiles in the organization. Implemented email alerting that includes remediation guides.
 - Implemented OAuth identification tracking on various resources and published analytics to analytical dashboards.

ADDITIONAL PROJECTS

- **Stock Trading Application** *2019 - Present*

Developed personal stock trading Python scripts that run daily in GCP, scheduled on a daily crontab schedule.

This functionality includes:

 - Pulling stock recommendations and news from various sources utilizing the Python requests library.
 - Algorithmically selecting tickers to monitor for breakouts.
 - Scraping real-time market data through Requests & BeautifulSoup Python libraries for real-time monitoring.
 - Placing buy/sell orders utilizing the Python Alpaca API with Textbelt text message alerts when trades are executed.

SKILLS

- **Languages (years):**
Python (7), SQL (6), Java (3), JavaScript (2), Groovy (2), React (2), Swagger (2), HTML/CSS, C (2)
- **Tools & Technologies:**
Azure (DevOps, Databricks, Infrastructure) | GCP | Oracle | AutoSys | Jenkins | Docker | Kubernetes | GitHub | Power BI | Pandas | Flask | Figma | Draw.io | Postman | Toad | Terraform | VS Code | PyCharm | Zoom
