— EXPERIENCE —

Software Engineer, Talcott Resolution, Hartford, CT *June 2023 - Present*

- Partnered with investment, risk, and actuarial stakeholders to deliver 44 new automated reporting use cases through GEAR, nearly doubling the prior year's output and saving an estimated 68 person-days of manual effort per month; recognized with an ACE Award for the platform's organizational impact.

- Architected containerized Python and FastAPI services on Azure Container Apps and Jobs, enabling on-demand execution of valuation, risk, and financial-reporting workloads with asynchronous status tracking and output delivery.

- Led technical delivery and cross-team coordination for Project Stellar, supporting the Nippon Life reinsurance deal through Microsoft Fabric and PySpark pipelines for financial and policy data ingestion, transformation, validation, and reconciliation.

- Developed Python and SQL systems supporting derivative valuation, market scenarios, hedging validation, investment reporting, and actuarial analytics using Oracle, SQL Server, Azure SQL, and cloud storage.

- Designed and built a Python and SQL SLA monitoring system for daily and monthly file deliveries, incorporating U.S. and Japan business calendars, time-zone handling, grace periods, and automated alerts for missed deadlines.

Software Engineer, Optum, Boston, MA *January 2020 - June 2023*

- Built Python pipelines processing large-scale unstructured datasets (audio + metadata) supporting analytics and machine learning workflows.

- Developed and evaluated automatic speech-recognition (ASR) models through Azure Machine Learning experiments, analyzing model accuracy and performance metrics.

- Automated batch processing workflows and monitoring using Jenkins and Azure tooling.

— SKILLS —

- **Languages:** Python, SQL, Java, JavaScript/TypeScript
- **Cloud & Platforms:** Azure Container Apps, Azure Container Apps Jobs, Azure Blob Storage, Azure Key Vault, Microsoft Fabric, Azure DevOps
- **Data & Distributed Processing:** PySpark, pandas, NumPy, SQL Server, Oracle, Azure SQL, ETL pipelines, multiprocessing, asynchronous processing
- **Backend & Engineering:** FastAPI, REST APIs, Linux, Docker, Git, CI/CD, automated testing, logging, monitoring, production support
- **Financial Systems:** Market and valuation data, derivative valuation, scenario processing, hedging workflows, portfolio analytics

— EDUCATION —

B.S. Computer Science, **Worcester Polytechnic Institute (WPI)**
