— EXPERIENCE —

Software Engineer, Talcott Resolution, Hartford, CT

June 2023 - Present

- Architected and deployed a distributed FastAPI-based analytics platform on Azure Container Apps enabling on-demand execution of quantitative valuation, reporting, and risk-processing workflows.
- Improved reliability and scalability of analytical processing workflows through distributed execution patterns, optimized SQL access strategies, logging, monitoring, and automated rerun tooling.
- Developed a React-based operational UI enabling business users to submit missing trade and settlement records, trigger rerun workflows, and resolve failed daily hedging validation processes through API-driven backend services.
- Built scalable Python services and distributed analytics pipelines processing high-volume market, valuation, and hedging datasets used in quantitative risk and investment workflows.
- Optimized SQL queries and backend access patterns, reducing service latency by ~30% and improving reliability of downstream analytics workflows.
- Partnered with risk and investment stakeholders to build analytical tooling for valuation, scenario processing, hedging datasets, and quantitative workflow automation across cloud-based platforms.

Software Engineer, Optum TDP, Boston, MA

January 2020 - June 2023

- Built Python pipelines processing large-scale unstructured datasets (audio + metadata) supporting analytics and machine learning workflows.
- Developed and executed AzureML experiments to train and evaluate ASR models, analyzing performance metrics.
- Automated batch processing workflows and monitoring using Jenkins and Azure tooling.

— PROJECTS —

Stock Trading Application

2019 - 2023

- Built an event-driven quantitative trading platform processing real-time market data streams for signal generation, portfolio analytics, quantitative signal evaluation, and automated execution workflows.
- Designed backend services and streaming pipelines for market monitoring, alerting, and quantitative strategy evaluation.
- Developed operational tooling and analytics interfaces for monitoring positions, trading activity, and strategy performance.

— SKILLS —

- **Languages:** Python (7 yrs, Pandas, NumPy, FastAPI), React (4 yrs), SQL (6 yrs), Java (4 yrs), JavaScript (4 yrs)
- **Quantitative & Data:** Time-Series Data Analysis, Portfolio Analytics, Market Data Processing

— EDUCATION —

Education: B.S. Computer Science, **Worcester Polytechnic Institute (WPI)**
