— WORK EXPERIENCE & PROJECTS —

Software Engineer, Talcott Resolution, Hartford, CT

June 2023 - Present

- Architected and deployed a FastAPI platform on Azure Container Apps enabling distributed compute orchestration, self-service processing, and real-time API-driven execution workflows.
- Leveraged AI-assisted engineering workflows (Claude, GitHub Copilot, GPT-based tooling) to accelerate software development, architecture iteration, debugging, documentation generation, and rapid prototyping across distributed systems and internal platform initiatives.
- Developed a React-based operational UI enabling business users to submit missing trade and settlement records, trigger rerun workflows, and resolve failed daily hedging validation processes through API-driven backend services.
- Built scalable Python services and API-driven data pipelines to ingest, transform, and serve high-volume financial datasets across distributed systems.
- Optimized SQL queries and backend access patterns, reducing service latency by ~30% and improving reliability of downstream analytics workflows.
- Implemented CI/CD pipelines and containerized deployment workflows improving release reliability and operational stability in cloud environments.

Software Engineer, Optum TDP, Boston, MA

January 2020 - June 2023

- Built Python pipelines processing large-scale unstructured datasets (audio + metadata) supporting analytics and machine learning workflows.
- Developed and executed AzureML experiments to train and evaluate ASR models, analyzing performance metrics.
- Automated batch processing workflows and monitoring using Jenkins and Azure tooling.

— ADDITIONAL PROJECTS —

Stock Trading Application

2019 - 2023

- Built an event-driven trading platform processing real-time market data streams, generating automated trading signals, portfolio analytics, and execution workflows.
- Designed backend services and streaming pipelines for market monitoring, alerting, and quantitative strategy evaluation.
- Developed operational tooling and analytics interfaces for monitoring positions, trading activity, and strategy performance.

— SKILLS —

- **Languages:** Python (7 yrs, Pandas, NumPy, FastAPI), React (3 yrs), SQL (6 yrs), Java (4 yrs), JavaScript (4 yrs)
- **Cloud & Tools:** Azure, Docker, Kubernetes, Jenkins, GCP, AutoSys, Unix/Linux

— EDUCATION —

Education: B.S. Computer Science, **Worcester Polytechnic Institute (WPI)**
